

Making a Real Impact

Why research Impact matters?

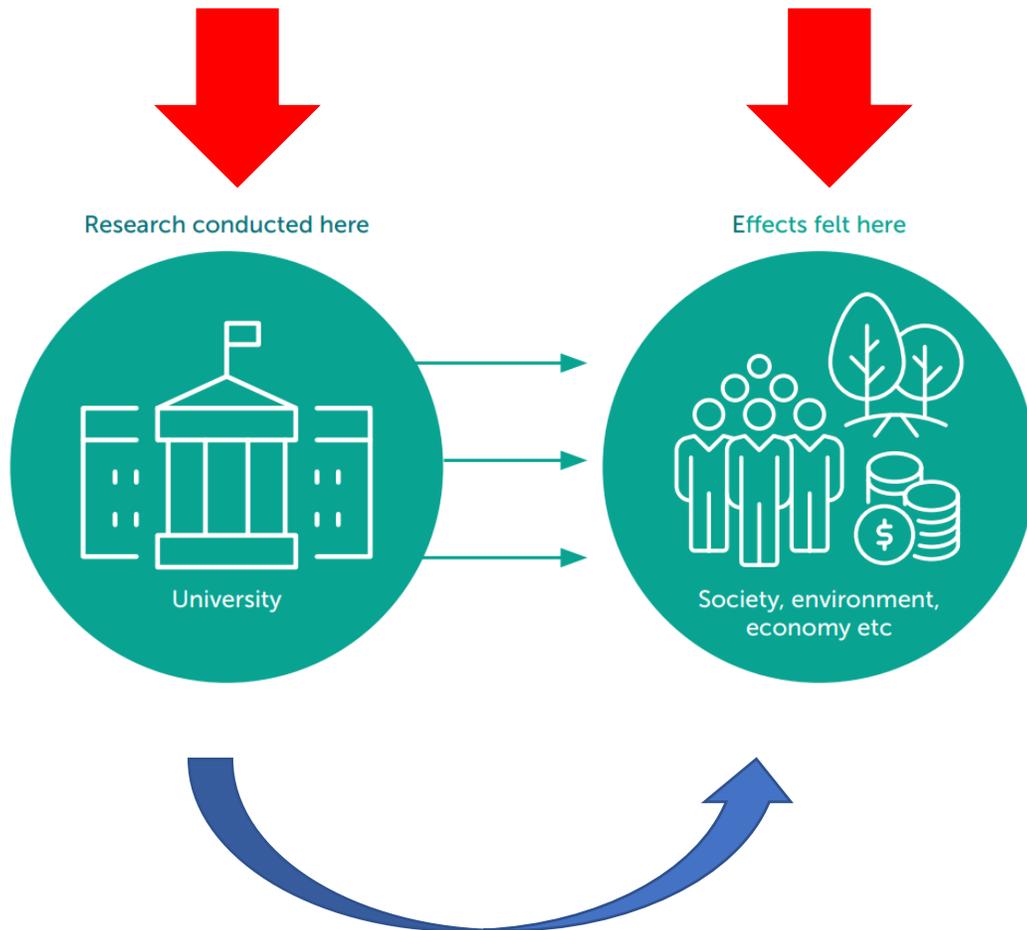

Research Impact – Making a
Difference in the World

Ian Boucher – Impact Services

Impact is about making a difference to the world

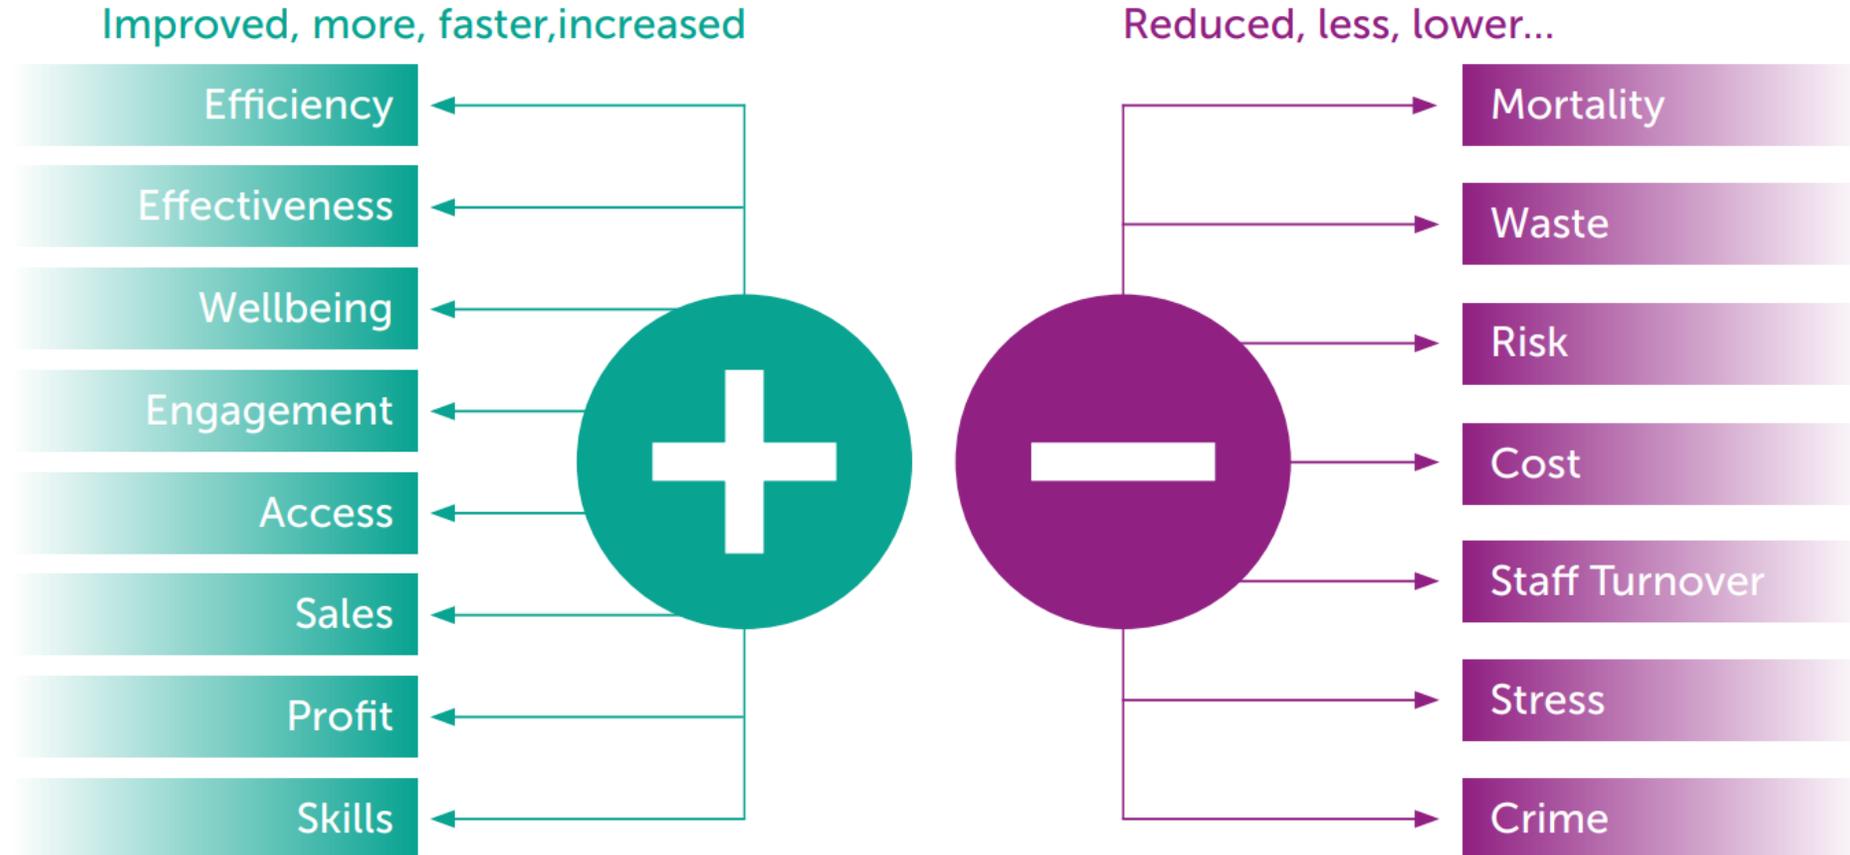

Impact is determined by where the effects of the research are felt outside academia, for instance:

- Benefits to society
- Benefits to the economy
- Benefits to the environment
- Cultural benefits

Impact = change

Impact examples

Areas of impact	Examples
Health and wellbeing	<ul style="list-style-type: none">• Outcomes for patients/users or related groups have improved• Misleading health claims identified by research are not included on food packaging• Health and social care training guidelines have changed
Understanding, learning and participation	<ul style="list-style-type: none">• Changes to education or the school curriculum have been informed by research• The awareness, attitudes or understanding of (sections of) the public have been informed, and their ability to make informed decisions on issues improved, by engaging them with research.
Public policy, law and services	<ul style="list-style-type: none">• Policymakers make use of research-based critical evidence synthesis in developing policy.• The work of an NGO, charitable or other organisation has been influenced by the research.

The research landscape is changing

And specifically, its assessment with a move away from purely quantitative metrics such as JIF or citations to

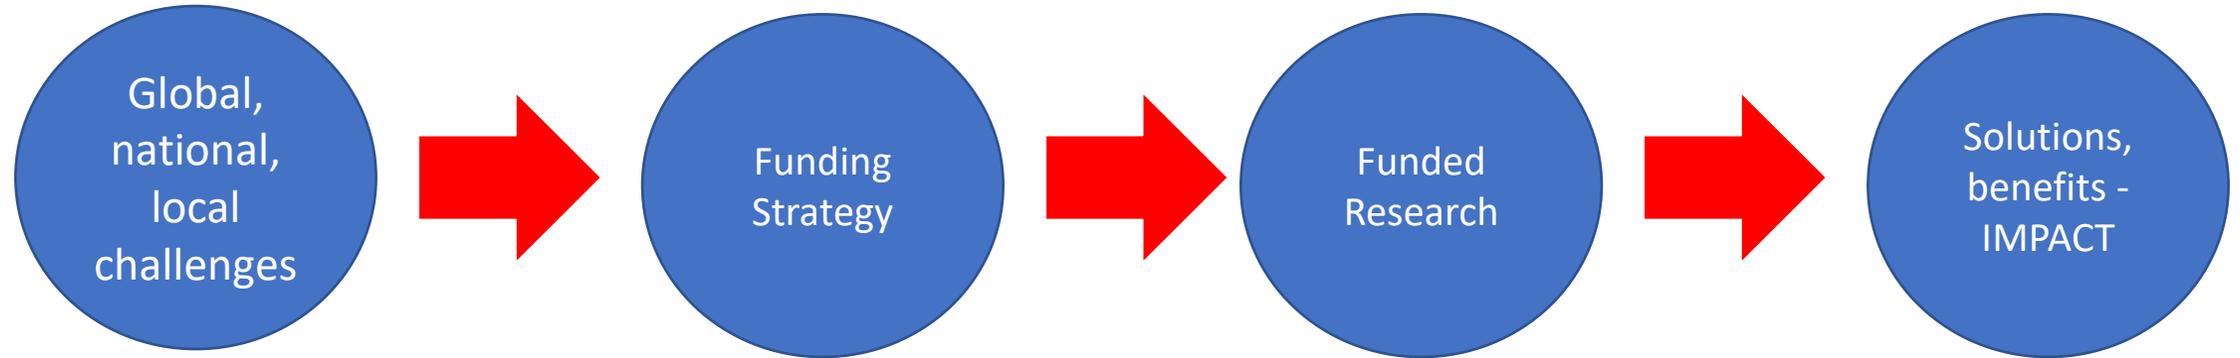

An increased importance paid to the societal impact of research as seen with the COVID-19 pandemic

The need to demonstrate impact is driven either centrally by assessment exercises such as the REF (UK) but also research funders' requirements to respond to a global and local challenge driven agenda.

So, impact, or the need to explain how research will benefit society, the economy, people or the wider world is likely to become more and more important.

Impact addresses challenge focused funding strategies

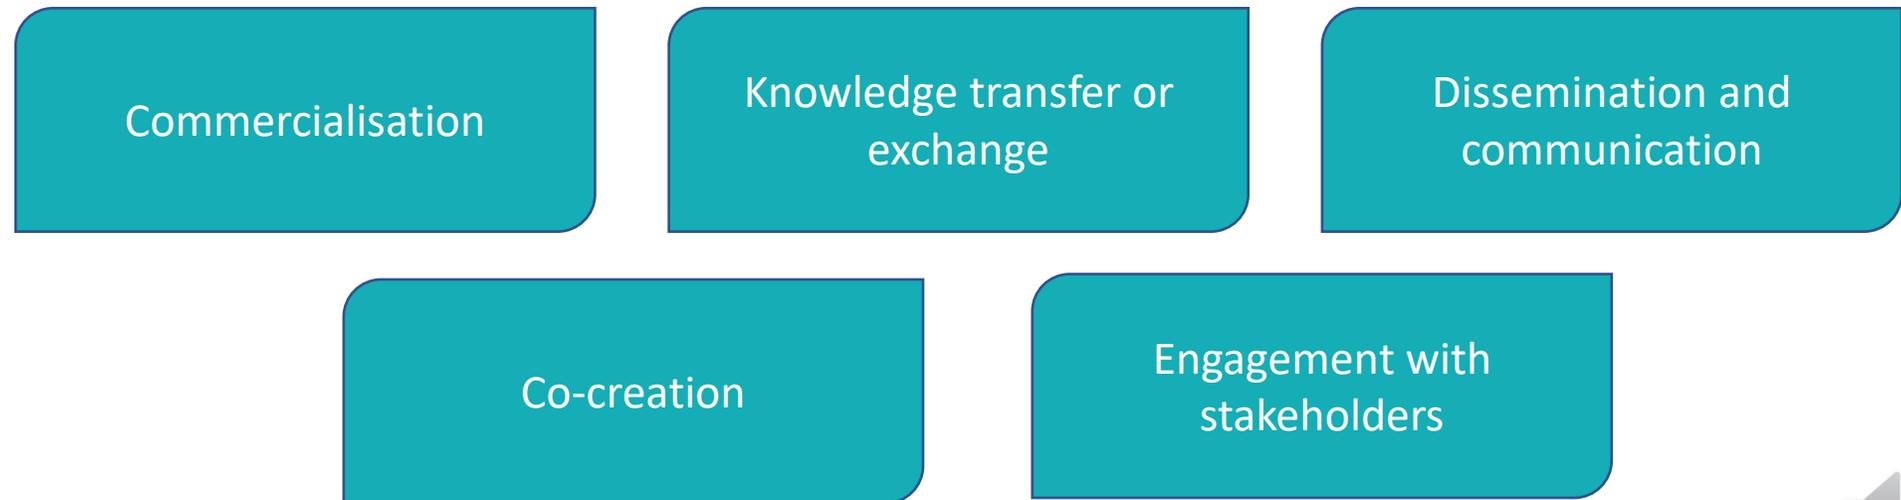

Impact plays a role in the outcomes from research bids across the world

Impact doesn't happen in isolation

- After all, researchers don't make change happen - the end users do
- So getting research into the hands of those that can make use of it is imperative
- If impact is *what* we want to do, these are *how* we can get there

Common impact myths

Impact is something big which happens at (or beyond) the end of a research project.

Only applied research has impact

Research to impact pathways are linear

Our commitment to real-world impact

2018

[Real Impact Manifesto](#)

2019

[DORA](#) signatory
Launch of [Emerald Open Research](#) - advance open publishing solutions
Launch of [Emerald Insight](#) - reimagine content beyond the article and surface mission-led content

2020

[UN SDG Publisher Compact](#) – aligned to our Real Impact Manifesto and our new Domain Strategy

2022

Renewal of Real Impact Manifesto – [Are you in?](#)

Our intent is to be a facilitator of research impact rather than a publisher of articles.

The need for impact literacy

Given the breadth of impact possibilities it's important to be able to understand, appraise and make decisions about how to connect research to the outside world. This understanding can be called *impact literacy*.

What changes (impacts) happen, for whom, and how it can be demonstrated

How research can be mobilised into action.

Who is involved in this, for what purpose, and with what skills

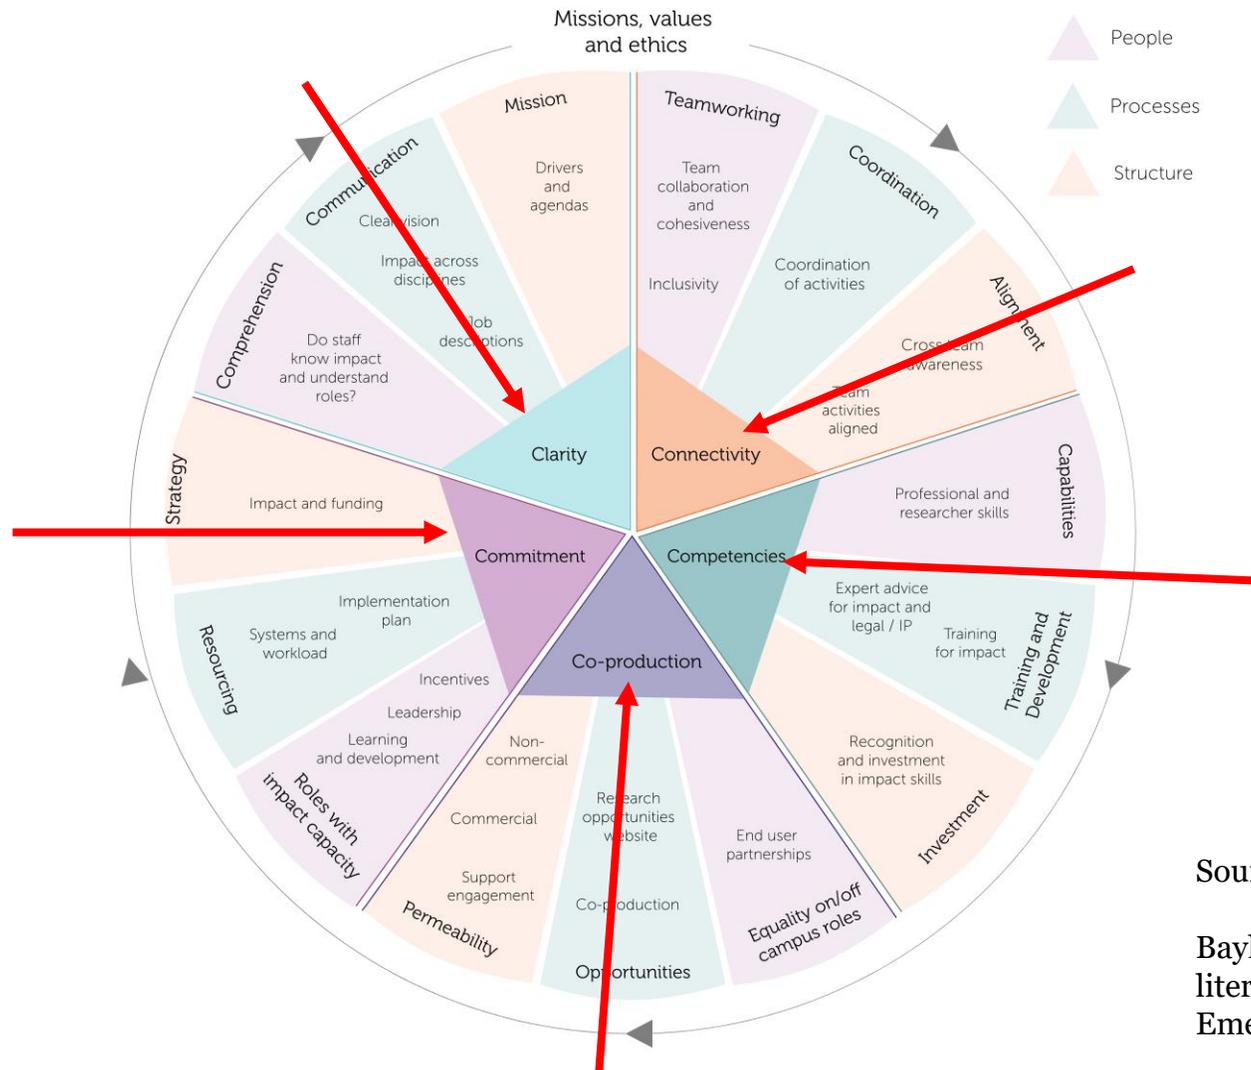

Why impact is being pursued, for what purpose, and with what ethical considerations.

The concept of *impact literacy* is attributed to Julie Bayley and David Phipps.

Bayley J and Phipps D. Extending the concept of research impact literacy: levels of literacy, institutional role and ethical considerations, *Emerald Open Res* 2019, 1:14

Planning for impact

It's also a myth that you can't plan impact

- Outlining stakeholders and associated activities increases the chances of research being used meaningfully
- Consider audience need, resources, people
- Set up means to monitor effects
- Plans might change and new opportunities arise
- A map by which impact can be navigated.

What changes and for whom?

How will you know?

How could you most appropriately/strongly 'prove' it?

How will you record it?

How will you communicate it?

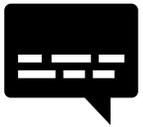

Developing skills for impact

Leading impact

Delivering impact

Effective communication

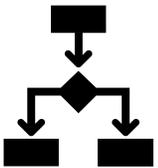

Impact partnerships

Strategy and planning

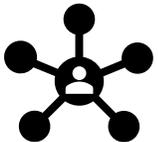

Impact training

Evaluating impact

Implementing impact strategy

Building and engaging networks

Impact Services

Supporting a culture of impact – championing impact literacy

Impact is the life and soul of research. It is the currency by which projects can be truly measured and the foundation on which every study can inspire.

Our Impact Services have been created in collaboration with innovative thought leaders, universities and institutions, all aiming to make "impact culture" a daily reality for researchers.

Follow your path to impact
with our experts

Emerald Impact Services

“Emerald's Impact Services provide globally leading, evidence-based resources to help plan for impact and build individual and institutional research impact literacy.

Using these resources, universities and other research institutions can facilitate impact on local and global communities.”

Dr David Phipps,
Assistant Vice-President, Research Strategy
& Impact at York University, Canada
and Network Director, Research Impact Canada

Dr Julie Bayley,
Director of Research Impact Development
at the Lincoln Institute of Impact Literacy at the
University of Lincoln

- An ***Impact Planner***; equipping individuals to build realistic, appropriate and achievable impact plans for their work
- An ***Impact Skills***; strengthening the range of skills within the sector to join research with society.
- An ***Impact Healthcheck***; supporting institutions to build healthy research impact environments

The Proof

Introduction

Are you clear on the problem your research is related to? What are the changes that your research is looking to affect?

Understanding the reason your research is important, who can confirm it is actually needed and the gap into which you work offers a contribution, is start of your path to impact.

This is a two-part process. First you will look at the overall and specific problems and then flip them individually to identify the changes you are looking for

1 Identifying the Need

Firstly, imagine the problem at two levels

Take a look at this video before we work through the problem:

Framing the Problem

Dr. Julie Bayley

In this video, Julie talks through the process of framing the problem your research is related to.

It will also give you insight into other areas you will want to consider on your path to impact.

Running time: 2:11

Who will be involved?

Think about the people involved to figure out when and how the changes occur

When will this happen?

In a month, a year, in 10 years?

How will you know the change(s) have happened?

What indicators will tell you that change(s) have occurred?

People or groups can:

Impact Skills

Plans

Skills

Skills

Here you will find a selection of over 150 pieces of content to help develop your impact literacy. To access relevant skills, you can use the skills drop-down or search in the keyword bar. For each skill, there is an estimate of how long it will take you to complete.

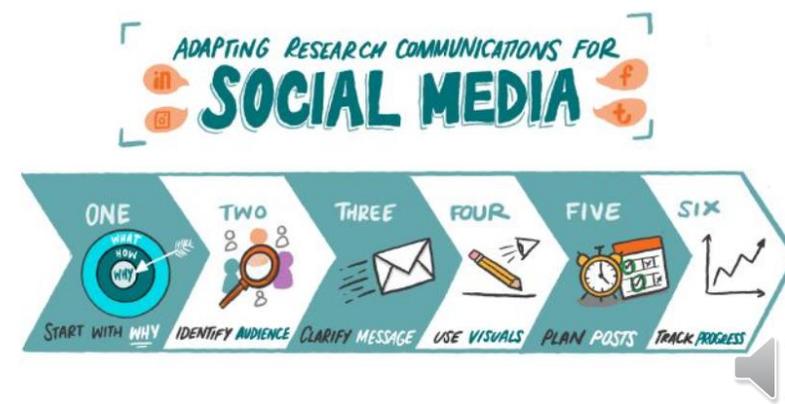

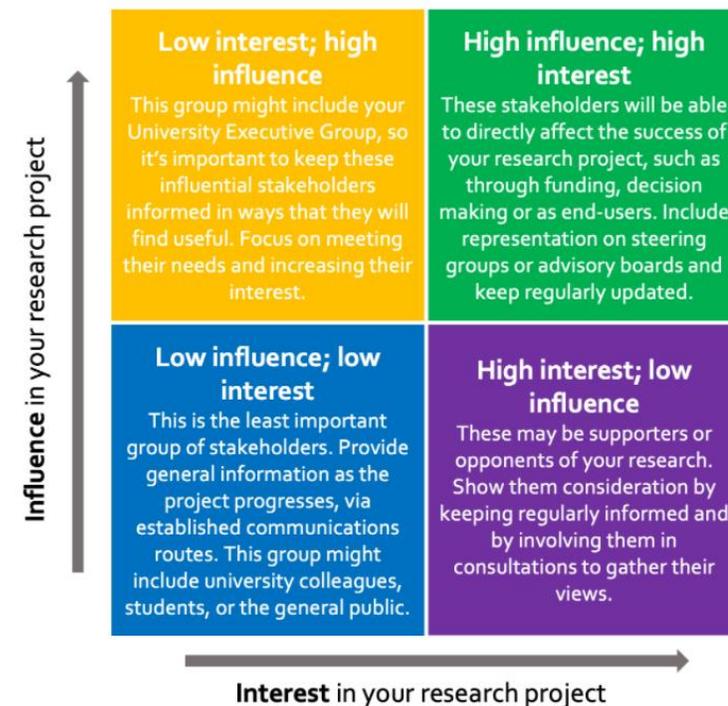

All skills
